

## MIPI I3C Family for Sensor and IoT Applications

I3C is a new a standard from the MIPI Alliance that unifies and extends the legacy interfaces of I2C and SPI and adds new powerful features to support modern mobile, automotive, and IOT applications. The range of I3C products from Silvaco allows customers to take full advantage of the high performance and low power features of I3C.

### APPLICATIONS

- Mechanical sensing (Gyroscopes, MEMS, etc.)
- Environmental sensing (Light, pressure, temperature, humidity, etc.)
- Biometrics (Fingerprinting, glucose, heart rate, breathalyzer, etc.)
- Communication (Near-field sensors, infrared remotes, etc.)

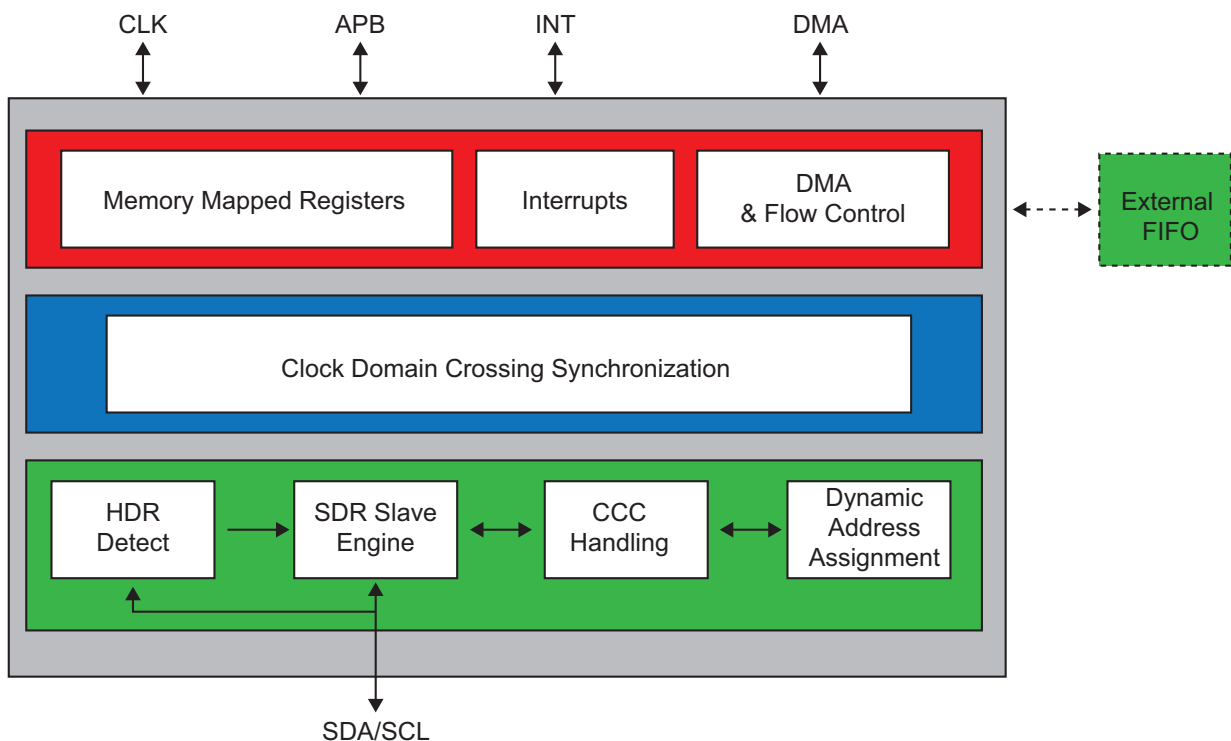

# I3C Dual-Role Master

The I3C Dual-Role Master controller is a highly configurable I3C master that can be used in microcontroller-based environments to provide I3C connectivity to any device. It contains master capabilities as well as the same features as the I3C Advanced Slave. It can be configured in a number of different ways to allow the core to use the minimum amount of logic to reduce both area (cost) and power.

## FEATURES

- Highly configurable core that allows customer to minimize unneeded logic
- Compliant with the latest version of the MIPI I3C specification
  - Legacy I2C coexistence, including I2C messaging
  - Dynamic addressing
  - Multi-drop capability
  - Multi-master capability
  - Single Data Rate (SDR)
  - Error detection types (S0-S5, M0-M2)
- Advanced I3C features
  - Hot join
  - Hot-join Dynamic Address Assignment
    - Secondary Master
    - SDR-only Secondary Master
  - Static I2C address support (Slave and SDR only Slave)
  - Support for I2C pads with 50ns glitch filter
  - In-band interrupts
  - Asynchronous time stamping (Mode 0)
  - High-speed mode (HDR-DDR)
  - Additional CCCs (ENTAS1-2, ENEC/DISEC, SET/GET Max, GETMXDS)
- AMBA APB (v3) application interface
  - Memory mapped registers
  - DMA, flow control features
  - FIFO options
    - Internal 2-byte ping-pong buffer
    - Internal FIFO (up to 32 bytes)
    - External FIFO interface
  - Slow clock option for ultra-low power operation
- Low gate count (2-5K gates, depending on configuration)

## BLOCK DIAGRAM

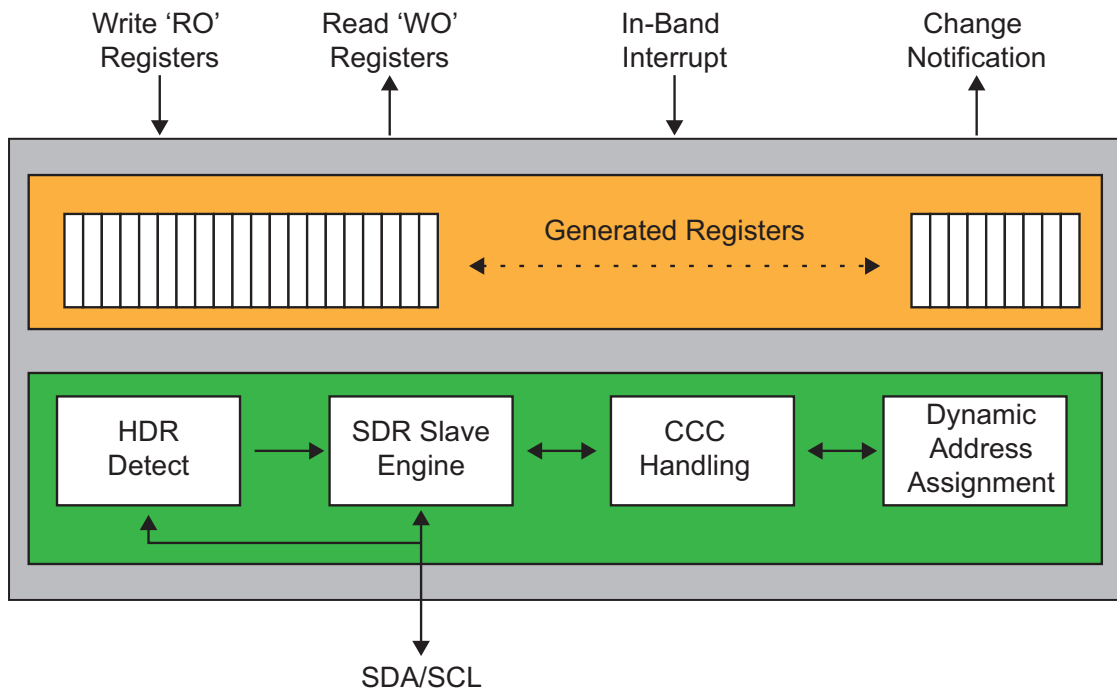

# I3C Autonomous Slave

The I3C Autonomous Slave controller is intended for simple, data acquisition types of applications where a microprocessor is not needed to process the data. Instead, data is exchanged via a simple set of register interfaces to the application and the controller autonomously manages all of the communication to an upstream I3C Master.

## FEATURES

- Highly configurable core that allows customer to minimize unneeded logic
  - Compliant with the latest version of the MIPI I3C specification
  - Legacy I2C coexistence, including I2C messaging
  - Support for I2C pads with 50ns glitch filter
  - Dynamic addressing
  - Multi-drop capability
  - Single Data Rate (SDR)
  - Error detection types (S0-S5, M0-M2)
- Advanced I3C features
  - Hot join
  - Static I2C address support (Slave and SDR only Slave)
  - In-band interrupts
  - Asynchronous time stamping (Mode 0)
  - High-speed mode (HDR-DDR)
  - Additional CCCs (ENTAS1-2, ENEC/DISEC, SET/GET Max, GETMXDS)
- Low gate count (<2K gates)
